

## Passive RF and Microwave Solutions for Mission-Critical Applications

# Quantic™ TRM

### Trusted by Industry Leaders

Quantic TRM is a trusted partner to prime defense contractors like BAE Systems, Raytheon, Lockheed Martin, Northrop Grumman, General Dynamics, Boeing and more. While offering more than 4000 catalog products, 95% of our business is custom, with our catalog portfolio providing the critical building blocks. As a member of the Quantic Electronics family, Quantic TRM is part of an extended engineering ecosystem and powerful supply chain, defining a competitive advantage that extends to every customer.

From catalog parts to custom solutions, Quantic TRM works with your RF engineering teams to deliver the technology that meets the needs of the application, whether straightforward or complex.

## Featured Products

### Power Dividers and Combiners

- › A power divider has a single designated input port and more than one output port. Quantic TRM offers a complete series of standard in-phase units from 2-way to 24-way

### Directional Couplers

- › A coupler is typically used to sample a signal from a transmission line. Complete range of narrow band units with multi-octave frequency coverage from 1 MHz to 26.5 GHz.

### Hybrid Combiners and Dividers

- › A standard hybrid may be the best solution to a tough power combiner requirement. Hybrids offer many advantages when used as a power combiner over traditional power divider.

### Beamforming Network

- › Beamformers are networks that perform vector manipulation of two or more inputs to produce two or more outputs.

### 10-Way Radial

- › Built using low loss with high power makes, which makes assembly very efficient.

### Custom Clock Divider

- › 3x24 Specialize Power Divider that has multiple inputs that distributes to multiple outputs.

### Hybrid Combiners and Dividers

- › Very high peak power divider/combiner network with very high altitude applications.

### Custom Low Profile

- › Designed for L0 signal distribution network for a spacecraft.
